

Are you making the most of innovations to ensure your city is resilient against climate change?

Cities and urban areas face a growing range of challenges from the effects from climate change to growing populations and from decreased biodiversity to inadequate infrastructure. Resilience is what helps to adapt and transform in the face of these challenges. It is now time for action: on policy making, planning and implementation! The Urban Resilience Technology Approval Group (TAG) is a peer-to-peer platform of cities, municipalities and utilities across Europe that helps you finding reliable innovative solutions, knowledge and learning from best-practices.

The next opportunity to meet and join the network is at Wednesday and Thursday, the 25th and 26th of September 2019 in Milan, Italy. We hope to welcome you there at the **Urban Resilience Technology Approval Group (UR TAG)**. For further information please [register here](#) or send an e-mail to bart.volkers@isleutilities.com

The Urban Resilience TAG

UR TAG brings together European cities, municipalities and utilities to collaboratively review and discuss the most innovative solutions in the fields of **Climate change adaptation, Heat stress, Energy transition, Nature-based solutions** and **Digitalization**, as well as facilitates the exchange of knowledge and best practices.

The **UR TAG platform meetings** are held three times a year across Europe. Each meeting comes with:

- Technology longlist with detailed synopsis on newly selected innovative technologies and a technology shortlist based on voting by municipalities, cities and utilities;
- Well-prepared non-commercial presentations by companies on the shortlisted technologies;
- Lively interactive sessions with peers across Europe and with presenters;
- Peer-to-peer knowledge exchange and strategy session on pre-selected themes/topics/cases;
- Updates on projects, (collaborative) pilots and technologies;
- Networking opportunities;
- Excursion/site visits to projects and best-practices of hosting city

Participation on the UR TAG also allows you access to the **Isle TAG Portal** with over 1.100 innovative and reviewed technologies that were presented on our Water and Waste Water TAG across the globe. The portal is growing with around 100 technologies each year.

UR TAG Membership

Participation at the UR TAG platform comes with an UR TAG membership. The costs depend on the membership period and membership of other TAG platforms. The annual costs are between EUR 8.400,= and EUR 11.000,= excluding VAT.

Interested utilities, cities and municipalities are welcome to join as an observer, before deciding on a membership.

The next meeting is at Wednesday and Thursday, the 25th and 26th of September 2019 in Milan, Italy.

We are Isle. We Bring technologies to life

Isle is an independent technology and innovation consultancy with a strong track record in supporting the introduction and commercialization of innovative technologies, through connecting our end-user clients in the water and wastewater, built environment and energy sectors directly to technology providers.

We continuously scout, assess and review new and innovative solutions that answer our clients needs and issues. We offer platform services, online databases and consultancy.

Set-up in 2005, Isle has reviewed over 5,000 technologies with about 1,100 screened technologies stored within our Technology Portal and been presented directly to end users.
